

The Geneva Energy Forum

Geneva Energy Forum

Mission

The Geneva Energy Forum recognises the fundamental role of energy in global economies and to social wellbeing. It also recognises that fact-based science and economics are essential to provide society with energy that is affordable, reliable and sustainable. The Forum is committed to improve access by recognised professionals to sources of expertise, and to facilitate business networking and collaboration between key stakeholders in the energy sector.

Vision

To create an independent, impartial and respected platform that is dedicated to bringing together professionals representing the different stakeholders in the energy sector and providing a service primarily to its members but also, as it may see fit, to the wider community. Societal expectations are evolving regarding fundamental changes to the source of energies and to their production, storage and consumption. In response, the Forum will provide members with knowledge, insight and interaction to better understand and act upon the resulting risks and opportunities. The Forum will be ideally placed to examine the complex mix of options placed before the energy sector as it strives to support society today and in the future.

Objectives

- Organise regular presentation luncheons for members and their guests.
- Attract leaders from all segments of the global energy sector as guests.
The range of topics will include, amongst others:
 - traditional and new sources of energy supply;
 - power generation, storage and delivery;
 - energy efficiency
 - energy finance and economics;
 - energy supply and demand;
 - energy politics and socio-economic and environmental impacts;
 - energy access and security;
 - technological developments;
 - major consumer energy transition

- UN Sustainable Development Goals, including environmental, social and governance standards, life-cycle analysis, the circular economy and environmental footprint.
- Establish for its membership a reputation for impartial expert knowledge and opinion across the energy sector.
- Promote outreach and help inform decision makers by making available professionals to present and debate the complexities of the evolving energy sector.
- To participate in public events to provide an impartial, fact-based and informed view of developments in energy transition and the likely impacts on society.
- To collaborate with other relevant professional organisations.
- To maintain a website dedicated to providing its members with materials relevant to the Forum's mission.
